Lisbon, Portugal (relocating to London)

SUMMARY

AI engineer with 9 years across software engineering, machine learning and AI systems. Shipped a copilot and semantic search to B2B customers; co-founded a multi-agent voice platform that executed 300k+ calls. Experience spans product discovery, backend systems and deep learning, from BERT models to real-time 3D avatars. Contributed to open source, including Inspect. Strong grasp of computer science and deep learning fundamentals.

EXPERIENCE

AI Engineer

Dennemeyer

Jul 2025 - Present
Lisbon, Portugal (Hybrid)

- Lead technical development of the AI features of DIAMS Infinity, an IP management system for patent and trademark portfolios, across R&D, production and product discovery.
- Shipped an app copilot. It was shown at the INTA IP exhibition, leading to 8+ enterprise beta customers.
- Translated user needs into an R&D roadmap of 3+ features for predictive IP planning and administrative automation.

Stack: Azure AI Foundry (GPT-family, Mistral), AKS, Postgres, Typesense, TypeScript.

Technical Co-Founder

Customer Support Singularity

Nov 2024 - Jun 2025
Remote

- Led technical product discovery and shipped a multi-agent voice outreach platform that executed 300k+ calls.
- Built agentic workflows for configurable conversation scripts, script analysis, red-flag detection and campaign analysis.
- Solved high-concurrency bottlenecks and implemented failure recovery, lead attribution tracking and Customer.io integration; added measurable call-to-action links through ShortIO.

Stack: Python, Django, Celery, Redis, Postgres, GPT-4o.

Machine Learning Engineer

Reface, backed by a16z

Nov 2021 - Aug 2024
Kyiv, Ukraine

- Engineered deep learning training pipelines that turn smartphone selfie videos into animatable, true-to-scale 3D head avatars in under 5 minutes.
- Deployed implicit neural textures on Meta Quest 2 mobile GPUs, writing custom shaders to decode learned feature maps in UV space for real-time rendering.

Stack: PyTorch, CUDA, 3DMM, GLSL, GAN, Stable Diffusion, GraphRAG. Shadertoy

Data Scientist

AltexSoft

Oct 2020 - Nov 2021
Lviv, Ukraine

- Fine-tuned and deployed BERT-family models for brand-awareness analytics: sentiment analysis, topic classification and trend detection on live news streams.
- Shipped a trend detection algorithm based on the Mann-Kendall test.

Stack: Python, PyTorch, ONNX, RoBERTa, ALBERT, TF-IDF.

ML Engineer / Software Engineer

Sigma Software

Jun 2018 - Oct 2020
Kharkiv, Ukraine

- Developed a chatbot using rules, embeddings and semantic search for thousands of employees.

- Shipped a mobile warehousing app used by 40k+ workers; engineered microservices for managing heating devices.

Stack: React Native, F#, C#, TypeScript, Azure Kubernetes Service (AKS), Python.

Haskell Developer Intern

Feb 2018 - May 2018

Serokell

Kharkiv, Ukraine

- Implemented bech32 decoding for bitcoin wallets, enabling addresses to be put into QR codes.

Stack: Haskell.

Software Engineer

Jun 2017 - Feb 2018

Compent

Kharkiv, Ukraine

- Developed a CMS for Danish sport teams; contributed to Umbraco CMS (merged Dec 2017).

Stack: C#, AngularJS.

PROJECTS

Inspect: open-source LLM evaluation (through ASET)

- Integrated the MGSM multilingual reasoning benchmark across 11 languages into inspect_evals (PR 41), with a sample-run comparison against OpenAI's simple-evals. Added CSV/TSV dataset loading to inspect_ai (PR 637). Both merged in 2024.

einsum3d: visualising tensor operations (2023-2024)

Live demo

- Built an interactive 3D visualisation of tensor operations, adapted from llm-viz.

Agent tools

neuralpulse-mcp | codenames-ai

- Built an MCP server for an RSS, YouTube and GitHub feed; built a Codenames game with human and LLM players, spymaster and operative roles, and agent debate.
- Built simple-agentic-evaluator to run spreadsheet-defined tests against agents and generate Markdown reports.

PUBLICATIONS

- *Implicit Meta-Learning in Small Transformer Models*. BlackboxNLP. Paper
- *Split Activation Networks for Neural Fields*. UCU Repository. Paper

EDUCATION

Master's degree, Data Science

2020 - 2023

Ukrainian Catholic University

Bachelor of Software Engineering

2016 - 2020

Kharkiv National University of Radio Electronics

SKILLS

- **Agents and evaluation:** large language models (LLMs), LangGraph, MCP, Inspect, prompt engineering, context engineering
- **Backend and integration:** Python, Django, Celery, Redis, Postgres, SQL, TypeScript, Typesense
- **ML and deployment:** PyTorch, BERT-family fine-tuning, neural fields, Azure AI Foundry, AKS, Docker, Linux
- **Interfaces and graphics:** Next.js, React Native, GLSL
